## A perfectly fitting awning or canopy from Unico

When you buy a product from Unico, you expect a perfectly fitting awning or canopy. Although we have included a large number of caravan circumference sizes in our database, it may happen that we need some dimensions from you. The drawing below will help you to measure the correct dimensions.

At a height of 200 cm. measured from the ground, place a perpendicular imaginary line to the bottom. So you can determine point **C**. From point **C** you go 45 cm. to the right so that you determine point **B**. The circumferential dimension is then the distance between points **A** and **B**. Also inform your dealer of the total height of the caravan (**E**), as well as the length at a height of 200 cm. (**D**).

- 1 Rail height on top of caravan, measured from the ground: \_\_\_\_\_ cm.
- 2 The length of the caravan, at a height of 200 cm, measured from the ground: \_\_\_\_\_ cm.
- 3 Distance between point A and point B, measured by the dotted line: \_\_\_\_\_ cm.
- 4 Caravan brand: \_\_\_\_\_  
 Caravan model: \_\_\_\_\_  
 Caravan type: \_\_\_\_\_  
 Year of construction caravan: \_\_\_\_\_
